

## Progressive lens design customized to eye shape—for faster adaptation and better acuity

Harmonix™, the latest patented technology from Essilor, improves individual visual performance and brings harmony to all components (eye, Rx, frame)

- Faster adaptation
  - 9 out of 10 patients adapt immediately
- Better visual performance
  - In a study of over 100 wearers, Accolade lenses outperformed Ovation® lenses in all vision parameters\*
- Even greater patient satisfaction than Ovation lenses
  - 3-to-1 preference in overall peripheral and dynamic vision

Each eye shape requires a unique lens design to maximize vision and adaptation

\*Including near, intermediate, and distance viewing, as well as overall vision and peripheral dynamic vision.

# Accolade Freedom™

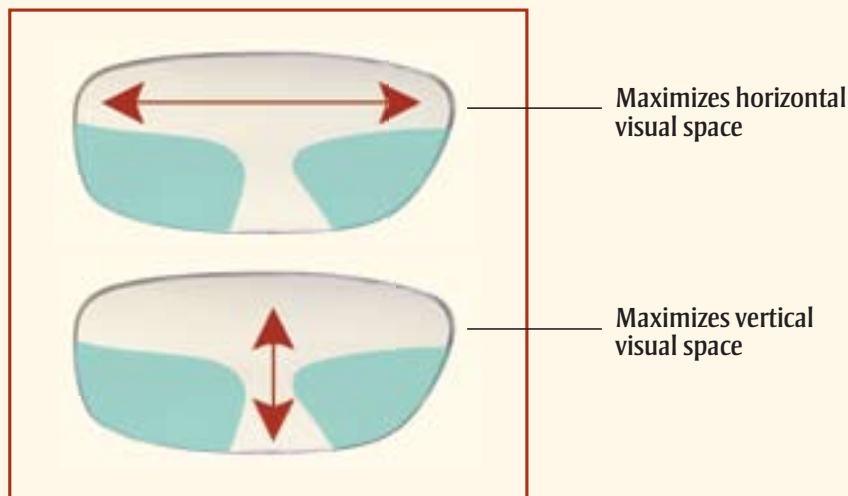

with the added dimension of FrameOptimization™ Technology

## Accolade Freedom with all the benefits of Accolade plus the added dimension of FrameOptimization Technology.

FrameOptimization Technology works in combination with Harmonix™ Technology to turn ordinary measurements into extraordinary visual performance.

- Maximizes the visual performance for each Rx
- Optimizes visual zones
- Provides better freedom in frame choice
- Delivers customized optimization without the need for additional measurements
- Preferred by progressive lens wearers over Ovation® lenses 3 to 1 for overall peripheral and dynamic vision

### Lens design optimized based on available visual space

FrameOptimization is the result of a patented combination of front and back design. It retains the initial design and provides the progression length according to the frame.
